

**DR. A.P.J. ABDUL KALAM TECHNICAL UNIVERSITY  
UTTAR PRADESH, LUCKNOW**

**Evaluation Scheme & Syllabus**

**For**

**B.Tech. 4<sup>th</sup> Year**

**Artificial Intelligence & Machine Learning**

**(Effective from the Session: 2024-25)**

## B.Tech. 4<sup>th</sup> Year

### Artificial Intelligence and Machine Learning CURRICULUM STRUCTURE

#### SEMESTER- VII

Sl. No.	Subject	Subject	Periods			Evaluation Scheme				End Semester		Total	Credit
	Codes		L	T	P	CT	TA	Total	PS	TE	PE		
1	KHU701/KHU702	HSMC -1 / HSMC-2	3	0	0	30	20	50		100		150	3
2	Dept. Elective-IV	Departmental Elective-IV	3	0	0	30	20	50		100		150	3
3	Dept. Elective-V	Departmental Elective-V	3	0	0	30	20	50		100		150	3
4	KOE07X	Open Elective-II	3	0	0	30	20	50		100		150	3
5	KCS751A	Departmental Elective Lab**	0	0	2					25	25	50	1
6	KCS752	Mini Project or Internship Assessment*	0	0	2					50		50	1
7	KCS753	Project	0	0	8					150		150	4
8		MOOCs (Essential for Hons. Degree)											
		<b>Total</b>	<b>12</b>	<b>0</b>	<b>12</b>							<b>850</b>	<b>18</b>

\*The Mini Project or internship (4 - 6 weeks) conducted during summer break after VI semester and will be assessed during VII semester.

\*\*Department may conduct one Lab of based on the elective subject chosen by the students in either Departmental Elective-IV or Departmental Elective-V

#### SEMESTER- VIII

Sl. No.	Subject	Subject	Periods			Evaluation Scheme				End Semester		Total	Credit
	Codes		L	T	P	CT	TA	Total	PS	TE	PE		
1	KHU801/KHU802	HSMC-1/HSMC-2	3	0	0	30	20	50		100		150	3
2	KOE08X	Open Elective-III	3	0	0	30	20	50		100		150	3
3	KOE09X	Open Elective-IV	3	0	0	30	20	50		100		150	3
4	KCS851	Project	0	0	18					100	300	400	9
5		MOOCs (Essential for Hons. Degree)											
		<b>Total</b>	<b>9</b>	<b>0</b>	<b>18</b>							<b>850</b>	<b>18</b>

### **Departmental Elective-IV**

1. KAI071 Optimization in Machine Learning
2. KAD074 Cognitive Computing
3. KAI073 Text Analytics and Natural Language Processing
4. KCS074 Cryptography and Network Security
5. KAI075 Data Warehousing and Data Mining
6. KAI076 Time Series Analysis and Forecasting
7. KAD073 Robotics and Automation

### **Departmental Elective-V**

1. KAI078 Nature-Inspired Computing
2. KAI079 Distributed Computing System
3. KCS710 Quantum Computing
4. KCS711 Mobile Computing
5. KCS712 Internet of Things
6. KAD075 Machine Learning & Network Security
7. KCS714 Blockchain Architecture Design

## B.Tech. 4<sup>th</sup> Year

### Artificial Intelligence and Machine Learning

<b>KAI071 Optimization in Machine Learning</b>		
Course Outcome ( CO)		Bloom's Knowledge Level (KL)
At the end of course , the student will be able to understand		
CO 1	Understand the basics of the <b>convex optimization</b> .	K <sub>2</sub>
CO 2	Understand the different <b>Gradient-based methods</b> .	K <sub>2</sub> , K <sub>3</sub>
CO 3	Can implement Newton's method and L-BFGS solvers for convex optimization problems,	K <sub>3</sub> , K <sub>4</sub>
CO 4	Can identify the trade-offs inherent in using first-order vs. second-order solvers for optimization problems arising in machine learning.	K <sub>2</sub> , K <sub>3</sub>
CO 5	Demonstrate competence with probability theory/statistics needed to formulate and solve machine learning problems.	K <sub>2</sub> , K <sub>4</sub>
DETAILED SYLLABUS		3-0-0
Unit	Topic	Proposed Lecture
<b>I</b>	<b>Basics of convex optimization</b> Convex sets, convexity-preserving operations, examples of convex programs (linear programming (LP), second-order cone programming (SOCP), semidefinite programming (SDP)), convex relaxation, KKT conditions, duality	<b>09</b>
<b>II</b>	<b>Gradient-based methods</b> Gradient descent, subgradient, mirror descent, Frank–Wolfe method, Nesterov's accelerated gradient method, ODE interpretations, dual methods, Nesterov's smoothing, proximal gradient methods, Moreau–Yosida regularization	<b>09</b>
<b>III</b>	<b>Operator splitting methods</b> Augmented Lagrangian methods, alternating direction method of multipliers (ADMM), monotone operators, Douglas–Rachford splitting, primal and dual decomposition	<b>09</b>
<b>IV</b>	<b>Stochastic and nonconvex optimization</b> Dual averaging, Polyak–Juditsky averaging, stochastic variance reduced gradient (SVRG), Langevin dynamics, escaping saddle points, landscape of nonconvex problems, deep learning	<b>09</b>
<b>V</b>	<b>Two Use Case of ML optimization Techniques</b>	<b>04</b>
<b>Text books:</b>		
<ol style="list-style-type: none"> <li>1. Stephen Boyd and Lieven Vandenberghe's book: Convex Optimization</li> <li>2. Nesterov's old book: Introductory Lectures on Convex Optimization: A Basic Course</li> <li>3. Neal Parikh and Stephen Boyd's monograph: Proximal Algorithms</li> <li>5. S'ébastien Bubeck's monograph: Convex Optimization: Algorithms and Complexity</li> <li>6. Moritz Hardt's Berkeley EE 227C course note</li> <li>7. Prateek Jain and Purushottam Kar's survey on nonconvex optimization</li> <li>8. Linear Algebra and Learning from Data, Gilbert Strang</li> <li>9. Convex Optimisation by Stephen Boyd</li> <li>10. Optimisation for Machine Learning by Suvrit Sra, MIT Press.</li> </ol>		

KAD074			Cognitive Computing		
Course Outcome (CO)			Bloom's Knowledge Level (KL)		
At the end of course, the student will be able to understand					
CO 1	Understand the foundation and principles of cognitive computing and its applications.				K1,K2
CO 2	Apply design principles to build cognitive systems and leverage machine learning for hypothesis generation and scoring.				K2
CO 3	Utilize natural language processing (NLP) techniques to support cognitive systems and solve business problems.				K4
CO 4	Effectively represent knowledge using taxonomies and ontologies in cognitive systems.				K3
CP 5	Explore the relationship between big data and cognitive computing, and integrate big data with traditional data sources.				K <sub>2</sub> , K <sub>3</sub>
<b>DETAILED SYLLABUS</b>					<b>3 1 0</b>
Unit	Topic				Proposed Lecture
I	<b>Foundation of Cognitive Computing:</b> Cognitive computing as a new generation, the uses of cognitive systems, system cognitive, gaining insights from data, Artificial Intelligence as the foundation of cognitive computing, understanding cognition.				<b>08</b>
II	<b>Design Principles for Cognitive Systems:</b> Components of a cognitive system, building the corpus, bringing data into cognitive systems, machine learning, hypotheses generation and scoring, presentation and visualization services.				<b>08</b>
III	<b>Natural Language Processing (NLP) in Cognitive Systems:</b> Role of NLP in a cognitive system, semantic web, Applying NLP technologies to business problems, representing knowledge.				<b>08</b>
IV	<b>Knowledge Representation in Cognitive Systems:</b> Defining taxonomies and ontologies, knowledge representation models, implementation considerations, effective representation of knowledge in cognitive systems.				<b>08</b>
V	<b>Big Data and Advanced Analytics in Cognitive Computing:</b> Relationship between big data and cognitive computing, integrating big data with traditional data sources, using advanced analytics techniques, the impact of open source tools on cognitive computing.				<b>08</b>
<b>Text books:</b>					
1. Judith H. Hurwitz, Marcia Kaufman, Adrian Bowles, <i>Cognitive Computing and Big Data Analytics</i> , Wiley.					
<b>eBooks:</b>					
2. Peter Fingar, <i>Cognitive Computing: A Brief Guide for Game Changers</i> . This book provides an overview of cognitive computing and its potential applications in various industries.					
<b>MOOC/ Video Lectures Available At:</b>					
3. <i>Introduction to Cognitive Computing</i> by IBM on Coursera. This course offers an introduction to cognitive computing, covering topics such as natural language processing, machine learning, and advanced analytics.					

<b>KAI073 Text Analytics and Natural Language Processing</b>		
<b>Course Outcome ( CO)</b>		<b>Bloom's Knowledge Level (KL)</b>
<b>At the end of course , the student will be able to understand</b>		
CO 1	To understand the fundamentals of text analytics and natural language processing	K2
CO 2	To learn understand the use of Natural Language Processing	K2, K3
CO 3	To understand the role of semantics of sentences and pragmatic	K3 , K4
CO 4	To Introduce Speech Production And Related Parameters Of Speech.	K2 , K3
CO 5	To Show The Computation And Use Of Techniques Such As Short Time Fourier Transform, Linear Predictive Coefficients And Other Coefficients In The Analysis Of Speech.	K2 , K4
<b>DETAILED SYLLABUS</b>		<b>3-0-0</b>
<b>Unit</b>	<b>Topic</b>	<b>Proposed Lecture</b>
<b>I</b>	Introduction to natural language processing (NLP) and text analytics. Linguistics Essentials. Foundations of text processing: tokenization, stemming, stopwords, lemmatization, part-of-speech tagging, syntactic parsing.	<b>08</b>
<b>II</b>	WORD LEVEL ANALYSIS : Unsmoothed N-grams, Evaluating N-grams, Smoothing, Interpolation and Backoff – Word Classes, Part-of-Speech Tagging, Rule-based, Stochastic and Transformation-based tagging, Issues in PoS tagging – Hidden Markov and Maximum Entropy models.	<b>08</b>
<b>III</b>	SEMANTICS AND PRAGMATICS: Requirements for representation, First-Order Logic, Description Logics – Syntax-Driven Semantic analysis, Semantic attachments – Word Senses, Relations between Senses, Thematic Roles, selectional restrictions – Word Sense Disambiguation, WSD using Supervised, Dictionary & Thesaurus, Bootstrapping methods – Word Similarity using Thesaurus and Distributional methods.	<b>08</b>
<b>IV</b>	<b>BASIC CONCEPTS of Speech Processing</b> : Speech Fundamentals: Articulatory Phonetics – Production And Classification Of Speech Sounds; Acoustic Phonetics – Acoustics Of Speech Production; Review Of Digital Signal Processing Concepts; Short-Time Fourier Transform, Filter-Bank And LPC Methods.	<b>08</b>
<b>V</b>	<b>SPEECH-ANALYSIS</b> : Features, Feature Extraction And Pattern Comparison Techniques: Speech Distortion Measures– Mathematical And Perceptual – Log–Spectral Distance, Cepstral Distances, Weighted Cepstral Distances And Filtering, Likelihood Distortions, Spectral Distortion Using A Warped Frequency Scale, LPC, PLP And MFCC Coefficients, Time Alignment And Normalization – Dynamic Time Warping, Multiple Time – Alignment Paths. <b>SPEECH MODELING</b> : Hidden Markov Models: Markov Processes, HMMs – Evaluation, Optimal State Sequence – Viterbi Search, Baum-Welch Parameter Re-Estimation, Implementation Issues.	<b>08</b>
<b>Text books:</b>		
1. Daniel Jurafsky, James H. Martin—Speech and Language Processing: An Introduction to Natural Language Processing, Computational Linguistics and Speech, Pearson Publication, 2014.		

2. Steven Bird, Ewan Klein and Edward Loper, —Natural Language Processing with Python, First Edition, OReilly Media, 2009.
3. Lawrence Rabiner And Biing-Hwang Juang, “Fundamentals Of Speech Recognition”, Pearson Education, 2003.
4. Daniel Jurafsky And James H Martin, “Speech And Language Processing – An Introduction To Natural Language Processing, Computational Linguistics, And Speech Recognition”, Pearson Education, 2002.
5. Frederick Jelinek, “Statistical Methods Of Speech Recognition”, MIT Press, 1997.
6. Breck Baldwin, —Language Processing with Java and LingPipe Cookbook, Atlantic Publisher, 2015.
7. Richard M Reese, —Natural Language Processing with Java, OReilly Media, 2015.

<b>KCS074</b>			<b>Cryptography &amp; Network Security</b>		
<b>Course Outcome ( CO)</b>			<b>Bloom's Knowledge Level (KL)</b>		
<b>At the end of course , the student will be able to understand</b>					
CO 1	Classify the symmetric encryption techniques and Illustrate various Public key cryptographic techniques.			K2 , K3	
CO 2	Understand security protocols for protecting data on networks and be able to digitally sign emails and files.			K1 , K2	
CO 3	Understand vulnerability assessments and the weakness of using passwords for authentication			K4	
CO 4	Be able to perform simple vulnerability assessments and password audits			K3	
CO 5	Summarize the intrusion detection and its solutions to overcome the attacks.			K2	
<b>DETAILED SYLLABUS</b>					<b>3-0-0</b>
<b>Unit</b>	<b>Topic</b>				<b>Proposed Lecture</b>
<b>I</b>	Introduction to security attacks, services and mechanism, Classical encryption techniques- substitution ciphers and transposition ciphers, cryptanalysis, steganography, Stream and block ciphers. Modern Block Ciphers: Block ciphers principles, Shannon's theory of confusion and diffusion, feistel structure, Data encryption standard(DES), Strength of DES, Idea of differential cryptanalysis, block cipher modes of operations, Triple DES				<b>08</b>
<b>II</b>	Introduction to group, field, finite field of the form GF(p), modular arithmetic, prime and relative prime numbers, Extended Euclidean Algorithm, Advanced Encryption Standard (AES) encryption and decryption Fermat's and Euler's theorem, Primarily testing, Chinese Remainder theorem, Discrete Logarithmic Problem, Principals of public key crypto systems, RSA algorithm, security of RSA				<b>08</b>
<b>III</b>	Message Authentication Codes: Authentication requirements, authentication functions, message authentication code, hash functions, birthday attacks, security of hash functions, Secure hash algorithm (SHA) Digital Signatures: Digital Signatures, Elgamal Digital Signature Techniques, Digital signature standards (DSS), proof of digital signature algorithm,				<b>08</b>
<b>IV</b>	Key Management and distribution: Symmetric key distribution, Diffie-Hellman Key Exchange, Public key distribution, X.509 Certificates, Public key Infrastructure. Authentication Applications: Kerberos, Electronic mail security: pretty good privacy (PGP), S/MIME.				<b>08</b>
<b>V</b>	IP Security: Architecture, Authentication header, Encapsulating security payloads, combining security associations, key management. Introduction to Secure Socket Layer, Secure electronic, transaction (SET) System Security: Introductory idea of Intrusion, Intrusion detection, Viruses and related threats, firewalls				<b>08</b>
<p><b>Text books:</b> 1. William Stallings, "Cryptography and Network Security: Principals and Practice", Pearson Education. 2. Behrouz A. Frouzan: Cryptography and Network Security, Tata McGraw Hill . 3. C K Shyamala, N Harini, Dr. T.R.Padmnabhan Cryptography and Security ,Wiley</p> <p>4. Bruce Schiener, "Applied Cryptography". John Wiley &amp; Sons</p> <p>5. Bernard Menezes," Network Security and Cryptography", Cengage Learning.</p> <p>6. AtulKahate, "Cryptography and Network Security", Tata McGraw Hill</p>					

<b>KAI075 Data Warehousing and Data Mining</b>		
<b>Course Outcome ( CO)</b>		<b>Bloom's Knowledge Level (KL)</b>
<b>At the end of course , the student will be able to understand</b>		
CO 1	Be familiar with mathematical foundations of data mining tools..	K1 , K2
CO 2	Understand and implement classical models and algorithms in data warehouses and data mining	K3
CO 3	Characterize the kinds of patterns that can be discovered by association rule mining, classification and clustering.	K1 , K2
CO 4	Master data mining techniques in various applications like social, scientific and environmental context.	K3
CO 5	Develop skill in selecting the appropriate data mining algorithm for solving practical problems.	K1 , K2
<b>DETAILED SYLLABUS</b>		<b>3-0-0</b>
<b>Unit</b>	<b>Topic</b>	<b>Proposed Lecture</b>
<b>I</b>	<b>Data Warehousing:</b> Overview, Definition, Data Warehousing Components, Building a Data Warehouse, Warehouse Database, Mapping the Data Warehouse to a Multiprocessor Architecture, Difference between Database System and Data Warehouse, Multi Dimensional Data Model, Data Cubes, Stars, Snow Flakes, Fact Constellations, Concept	<b>08</b>
<b>II</b>	<b>Data Warehouse Process and Technology:</b> Warehousing Strategy, Warehouse /management and Support Processes, Warehouse Planning and Implementation, Hardware and Operating Systems for Data Warehousing, Client/Server Computing Model & Data Warehousing. Parallel Processors & Cluster Systems, Distributed DBMS implementations, Warehousing Software, Warehouse Schema Design,	<b>08</b>
<b>III</b>	<b>Data Mining:</b> Overview, Motivation, Definition & Functionalities, Data Processing, Form of Data Pre-processing, Data Cleaning: Missing Values, Noisy Data, (Binning, Clustering, Regression, Computer and Human inspection), Inconsistent Data, Data Integration and Transformation. Data Reduction:-Data Cube Aggregation, Dimensionality reduction, Data Compression, Numerosity Reduction, Discretization and Concept hierarchy generation, Decision Tree.	<b>08</b>
<b>IV</b>	<b>Classification:</b> Definition, Data Generalization, Analytical Characterization, Analysis of attribute relevance, Mining Class comparisons, Statistical measures in large Databases, Statistical-Based Algorithms, Distance-Based Algorithms, Decision Tree-Based Algorithms. Clustering: Introduction, Similarity and Distance Measures, Hierarchical and Partitional Algorithms. Hierarchical Clustering- CURE and Chameleon. Density Based Methods-DBSCAN, OPTICS. Grid Based Methods- STING, CLIQUE. Model Based Method –Statistical Approach, Association rules: Introduction, Large Item sets, Basic Algorithms, Parallel and Distributed Algorithms, Neural Network approach.	<b>08</b>
<b>V</b>	<b>Data Visualization and Overall Perspective:</b> Aggregation, Historical information, Query Facility, OLAP function and Tools. OLAP Servers, ROLAP, MOLAP, HOLAP, Data Mining interface, Security, Backup and Recovery, Tuning Data Warehouse, Testing Data Warehouse. Warehousing applications and Recent Trends: Types of Warehousing Applications, Web Mining, Spatial Mining and Temporal Mining	<b>08</b>
<b>Text books:</b>		
<ol style="list-style-type: none"> <li>1. Alex Berson, Stephen J. Smith “Data Warehousing, Data-Mining &amp; OLAP”, TMH</li> <li>2. Mark Humphries, Michael W. Hawkins, Michelle C. Dy, “ Data Warehousing: Architecture and Implementation”, Pearson</li> <li>3. Margaret H. Dunham, S. Sridhar, ”Data Mining: Introductory and Advanced Topics” Pearson Education</li> <li>4. Arun K. Pujari, “Data Mining Techniques” Universities Press</li> <li>5. Pieter Adriaans, Dolf Zantinge, “Data-Mining”, Pearson Education</li> </ol>		

<b>KAI076 Time Series Analysis and Forecasting</b>		
<b>Course Outcome ( CO)</b>		<b>Bloom’s Knowledge Level (KL)</b>
<b>At the end of course , the student will be able to understand</b>		
CO 1	Analyze any time series data using various statistical approaches.	K2 , K3
CO 2	Know basic concepts of univariate time series analysis; build appropriate econometric time series models.	K3, K4
CO 3	Know basic concepts of multivariate time series analysis; build appropriate econometric time series models.	K1 , K2
CO 4	Understand limitation and relevance of the models.	K1 , K2
CO 5	Generate reasonable forecast values, and to make concise decisions based on forecasts obtained	K2
<b>DETAILED SYLLABUS</b>		<b>3-0-0</b>
<b>Unit</b>	<b>Topic</b>	<b>Proposed Lecture</b>
<b>I</b>	INTRODUCTION OF TIMESERIES ANALYSIS: Introduction to Time Series and Forecasting, Different types of data, Internal structures of time series. Models for time series analysis, Autocorrelation and Partial autocorrelation. Examples of Time series Nature and uses of forecasting, Forecasting Process, Data for forecasting, Resources for forecasting.	<b>08</b>
<b>II</b>	STATISTICS BACKGROUND FOR FORECASTING: Graphical Displays, Time Series Plots, Plotting Smoothed Data, Numerical Description of Time Series Data, Use of Data Transformations and Adjustments, General Approach to Time Series Modeling and Forecasting, Evaluating and Monitoring Forecasting Model Performance.	<b>08</b>
<b>III</b>	TIME SERIES REGRESSION MODEL: Introduction Least Squares Estimation in Linear Regression Models, Statistical Inference in Linear Regression, Prediction of New Observations, Model Adequacy Checking, Variable Selection Methods in Regression, Generalized and Weighted Least Squares, Regression Models for General Time Series Data, Exponential Smoothing, First order and Second order.	<b>08</b>
<b>IV</b>	AUTOREGRESSIVE INTEGRATED MOVING AVERAGE (ARIMA) MODELS: Autoregressive Moving Average (ARMA) Models – Stationary and Inevitability of ARMA Models - Checking for Stationary using Variogram- Detecting Non-stationary - Autoregressive Integrated Moving Average (ARIMA) Models - Forecasting using ARIMA - Seasonal Data -Seasonal ARIMA Models Forecasting using Seasonal ARIMA Models Introduction - Finding the “BEST” Model -Example: Internet Users Data Model Selection Criteria - Impulse Response Function to Study the Differences in Models Comparing Impulse Response Functions for Competing Models .	<b>08</b>
<b>V</b>	MULTIVARIATE TIME SERIES MODELS AND FORECASTING: Multivariate Time Series Models and Forecasting, Multivariate Stationary Process, Vector ARIMA Models, Vector AR (VAR) Models, Neural Networks and Forecasting Spectral Analysis, Bayesian Methods in Forecasting.	<b>08</b>
<b>Text books:</b>		
<ol style="list-style-type: none"> <li>1. Introduction To Time Series Analysis And Forecasting, 2nd Edition, Wiley Series In Probability And Statistics, By Douglas C. Montgomery, Cheryl L. Jen(2015)</li> <li>2. Master Time Series Data Processing, Visualization, And Modeling Using Python Dr. Avishek Pal Dr. Pks Prakash (2017)</li> <li>3. Kendall M.G. (1976): Time Series, Charles Griffin.</li> <li>4. Chatfield C. (1980): The Analysis of Time Series –An Introduction, Chapman &amp; Hall.</li> <li>5. Mukhopadhyay P. (2011): Applied Statistics, 2nd ed. Revised reprint, Books and Allied</li> </ol>		

<b>KAD073</b>			<b>Robotics and Automation</b>				
<b>Course Outcome (CO)</b>		<b>Bloom's Knowledge Level (KL)</b>					
<b>At the end of course, the student will be able to understand</b>							
CO 1	Understand the integration of machine learning techniques with network security.	K1					
CO 2	Analyze different network threats and apply machine learning models for threat detection.	K2					
CO 3	Implement supervised and unsupervised machine learning algorithms for anomaly detection in network traffic.	K3					
CO 4	Develop systems for predicting and mitigating security breaches using advanced machine learning techniques.	K3					
CO 5	Evaluate the effectiveness and scalability of machine learning models in diverse network environments.	K4					
<b>DETAILED SYLLABUS</b>					<b>3</b>	<b>1</b>	<b>0</b>
<b>Unit</b>	<b>Topic</b>				<b>Proposed Lecture</b>		
<b>I</b>	<b>Introduction to Machine Learning in Network Security:</b> Overview of machine learning techniques, Introduction to network security, Integration of machine learning in network security.				<b>08</b>		
<b>II</b>	<b>Anomaly Detection and Intrusion Detection Systems (IDS):</b> Machine Learning Models for Anomaly Detection, Supervised and Unsupervised Learning Techniques, Data Preprocessing, Types of IDS, Implementing IDS using Machine Learning, Case Studies of Machine Learning based IDS, Challenges and Future Directions.				<b>08</b>		
<b>III</b>	<b>Malware Analysis and Network Traffic Analysis:</b> Types of Malware, Feature Extraction Techniques, Machine Learning Models for Malware Detection and Classification, Hands-on with Malware Datasets, Machine Learning for Network Traffic Classification, Predictive Modeling, Real-time Analysis Techniques, Building a Predictive Model for Network Attack Classification.				<b>08</b>		
<b>IV</b>	<b>Securing the Consumer Web:</b> Monetizing the Consumer Web, Data Abuse and Preventive Measures, Machine Learning for Abuse Detection, Case Studies and Applications.				<b>08</b>		
<b>V</b>	<b>Production Systems in Machine Learning for Network Security:</b> Maturity and Scalability of ML Systems, Data Quality and Model Quality, Performance Metrics, Security and Reliability in Machine Learning Systems.				<b>08</b>		
<b>Text books:</b>							
<ol style="list-style-type: none"> <li>1. Clarence Chio, David Freeman, <i>Machine Learning and Security</i>, O'Reilly Media.</li> <li>2. Sumeet Dua, Xian Du, <i>Data Mining and Machine Learning in Cybersecurity</i>, CRC Press.</li> <li>3. Chris Sanders, <i>Practical Packet Analysis: Using Wireshark to Solve Real-World Network Problems</i>.</li> <li>8. William Stallings, <i>Network Security Essentials: Applications and Standards</i>.</li> </ol>							
<b>MOOC/ Video Lectures Available At:</b>							
<ol style="list-style-type: none"> <li>9. <i>Machine Learning</i> by Stanford University on Coursera.</li> <li>10. <i>Deep Learning Specialization</i> by deeplearning.ai on Coursera.</li> <li>11. <i>Machine Learning with Python</i> by IBM on Coursera.</li> </ol>							

<b>KAI078 Nature-Inspired Computing</b>		
<b>Course Outcome ( CO)</b>		<b>Bloom's Knowledge Level (KL)</b>
<b>At the end of course , the student will be able :</b>		
CO 1	The basics of Natural systems	K <sub>1</sub> , K <sub>2</sub>
CO 2	The concepts of Natural systems and its applications	K <sub>1</sub> , K <sub>2</sub>
CO 3	Basic Natural systems functions(operations)	K <sub>2</sub>
CO 4	Natural design considerations.	K <sub>2</sub> , K <sub>3</sub>
CO 5	Integration of Hardware and software in Natural applications.	K <sub>3</sub> , K <sub>6</sub>
<b>DETAILED SYLLABUS</b>		<b>3-0-0</b>
<b>Unit</b>	<b>Topic</b>	<b>Proposed Lecture</b>
<b>I</b>	INTRODUCTION: From Nature to Nature Computing , Philosophy , Three Branches: A Brief Overview, Individuals, Entities and agents - Parallelism and Distributivity Interactivity ,Adaptation Feedback-Self-Organization-Complexity, Emergence and ,Bottom-up Vs Top-Down-Determination, Chaos and Fractals	<b>08</b>
<b>II</b>	Computing Inspired by Nature: Evolutionary Computing, Hill Climbing and Simulated Annealing, Darwin's Dangerous Idea, Genetics Principles, Standard Evolutionary Algorithm –Genetic Algorithms , Reproduction-Crossover, Mutation, Evolutionary Programming, Genetic Programming	<b>08</b>
<b>III</b>	SWARM INTELLIGENCE: Introduction - Ant Colonies, Ant Foraging Behavior, Ant Colony Optimization, SACO and scope of ACO algorithms, Ant Colony Algorithm (ACA), Swarm Robotics, Foraging for food, Social Adaptation of Knowledge , Particle Swarm Optimization (PSO)	<b>08</b>
<b>IV</b>	IMMUNOCOMPUTING: Introduction- Immune System, Physiology and main components, Pattern Recognition and Binding , Immune Network Theory- Danger Theory, Evaluation Interaction-Immune Algorithms , Introduction – Genetic algorithms , Bone Marrow Models ,Forest's Algorithm, Artificial Immune Networks	<b>08</b>
<b>V</b>	COMPUTING WITH NEW NATURAL MATERIALS: DNA Computing: Motivation, DNA Molecule , Adleman's experiment , Test tube programming language, Universal DNA Computers , PAM Model , Splicing Systems , Lipton's Solution to SAT Problem , Scope of DNA Computing , From Classical o DNA Computing	<b>08</b>
<b>Text books:</b>		
<ol style="list-style-type: none"> <li>1. Leandro Nunes de Castro, " Fundamentals of Natural Computing, Basic Concepts, Algorithms and Applications", Chapman &amp; Hall/ CRC, Taylor and Francis Group, 2007</li> <li>2. <b>KAI079</b>			<b>Distributed Computing System</b>		
<b>Course Outcome ( CO)</b>			<b>Bloom's Knowledge Level (KL)</b>		
<b>At the end of course , the student will be able :</b>					
CO 1	Define the characterization of Distributed Systems, Theoretical Foundation for Distributed System and Concepts in Message Passing Systems.		K1 , K2		
CO 2	Explain the Distributed Mutual Exclusion and Distributed Deadlock Detection.		K3		
CO 3	Apply the Agreement Protocols and Distributed Resource Management.		K4		
CO 4	Analyze the Failure Recovery in Distributed Systems and Fault Tolerance.		K2		
CO 5	Evaluate the Transactions and Concurrency Control, Distributed Transactions and Replication		K1		
<b>DETAILED SYLLABUS</b>			<b>3-0-0</b>		
<b>Unit</b>	<b>Topic</b>				<b>Proposed Lecture</b>
<b>I</b>	<b>Characterization of Distributed Systems:</b> Introduction, Examples of distributed Systems, Resource sharing and the Web Challenges. Architectural models, Fundamental Models. Theoretical Foundation for Distributed System: Limitation of Distributed system, absence of global clock, shared memory, Logical clocks ,Lamport's & vectors logical clocks. Concepts in Message Passing Systems: causal order, total order, total causal order, Techniques for Message Ordering, Causal ordering of messages, global state, termination detection.				<b>08</b>
<b>II</b>	<b>Distributed Mutual Exclusion:</b> Classification of distributed mutual exclusion, requirement of mutual exclusion theorem, Token based and non token based algorithms, performance metric for distributed mutual exclusion algorithms. Distributed Deadlock Detection: system model, resource Vs communication deadlocks, deadlock prevention, avoidance, detection & resolution, centralized dead lock detection, distributed dead lock detection, path pushing algorithms, edge chasing algorithms.				<b>08</b>
<b>III</b>	<b>Agreement Protocols:</b> Introduction, System models, classification of Agreement Problem, Byzantine agreement problem, Consensus problem, Interactive consistency Problem, Solution to Byzantine Agreement problem, Application of Agreement problem, Atomic Commit in Distributed Database system. Distributed Resource Management: Issues in distributed File Systems, Mechanism for building distributed file systems, Design issues in Distributed Shared Memory, Algorithm for Implementation of Distributed Shared Memory.				<b>08</b>
<b>IV</b>	Failure Recovery in Distributed Systems: Concepts in Backward and Forward recovery, Recovery in Concurrent systems, Obtaining consistent Checkpoints, Recovery in Distributed Database Systems. Fault Tolerance: Issues in Fault Tolerance, Commit Protocols, Voting protocols, Dynamic voting protocols				<b>08</b>
<b>V</b>	<b>Transactions and Concurrency Control:</b> Transactions, Nested transactions, Locks, Optimistic Concurrency control, Timestamp ordering, Comparison of methods for concurrency control. Distributed Transactions: Flat and nested distributed transactions, Atomic Commit protocols, Concurrency control in distributed transactions, Distributed deadlocks, Transaction recovery. Replication: System model and group communication, Fault - tolerant services, highly available services, Transactions with replicated data.				<b>08</b>
<b>Text books:</b>					
1. Singhal&Shivaratri, "Advanced Concept in Operating Systems", McGraw Hill					
2. Ramakrishna,Gehrke," Database Management Systems", McGraw Hill					
3. Vijay K.Garg Elements of Distributed Computing , Wiley					
4. Coulouris, Dollimore, Kindberg, "Distributed System: Concepts and Design", Pearson Education 5. Tenanuanbaum, Steen," Distributed Systems", PHI					

KCS710		Quantum Computing	
Course Outcome ( CO)		Bloom's Knowledge Level (KL)	
At the end of course , the student will be able to understand			
CO 1	Distinguish problems of different computational complexity and explain why certain problems are rendered tractable by quantum computation with reference to the relevant concepts in quantum theory.	K <sub>1</sub> , K <sub>2</sub>	
CO 2	Demonstrate an understanding of a quantum computing algorithm by simulating it on a classical computer, and state some of the practical challenges in building a quantum computer.	K <sub>2</sub> , K <sub>3</sub>	
CO 3	Contribute to a medium-scale application program as part of a co-operative team, making use of appropriate collaborative development tools (such as version control systems).	K <sub>2</sub> , K <sub>3</sub>	
CO 4	Produce code and documentation that is comprehensible to a group of different programmers and present the theoretical background and results of a project in written and verbal form.	K <sub>3</sub> , K <sub>4</sub>	
CO 5	Apply knowledge, skills, and understanding in executing a defined project of research, development, or investigation and in identifying and implementing relevant outcomes.	K <sub>3</sub> , K <sub>6</sub>	
DETAILED SYLLABUS			3-0-0
Unit	Topic	Proposed Lecture	
I	<b>Fundamental Concepts:</b> Global Perspectives, Quantum Bits, Quantum Computation, Quantum Algorithms, Quantum Information, Postulates of Quantum Mechanisms.	08	
II	<b>Quantum Computation:</b> Quantum Circuits – Quantum algorithms, Single Orbit operations, Control Operations, Measurement, Universal Quantum Gates, Simulation of Quantum Systems, Quantum Fourier transform, Phase estimation, Applications, Quantum search algorithms – Quantum counting – Speeding up the solution of NP – complete problems – Quantum Search for an unstructured database.	08	
III	<b>Quantum Computers:</b> Guiding Principles, Conditions for Quantum Computation, Harmonic Oscillator Quantum Computer, Optical Photon Quantum Computer – Optical cavity Quantum electrodynamics, Ion traps, Nuclear Magnetic resonance	08	
IV	<b>Quantum Information:</b> Quantum noise and Quantum Operations – Classical Noise and Markov Processes, Quantum Operations, Examples of Quantum noise and Quantum Operations – Applications of Quantum operations, Limitations of the Quantum operations formalism, Distance Measures for Quantum information.	08	
V	<b>Quantum Error Correction:</b> Introduction, Shor code, Theory of Quantum Error –Correction, Constructing Quantum Codes, Stabilizer codes, Fault – Tolerant Quantum Computation, Entropy and information – Shannon Entropy, Basic properties of Entropy, Von Neumann, Strong Sub Additivity, Data Compression, Entanglement as a physical resource .	08	
<b>Text books:</b>

2. Eleanor G. Rieffel , Wolfgang H. Polak , “Quantum Computing - A Gentle Introduction” (Scientific and Engineering Computation) Paperback – Import,			
3 Oct 2014 3. Computing since Democritus by Scott Aaronson			
4. Computer Science: An Introduction by N. David Mermin 5. Yanofsky's and Mannucci, Quantum Computing for Computer Scientists.			

KCS711		Mobile Computing	
Course Outcome (CO)		Bloom's Knowledge Level (KL)	
At the end of course, the student will be able to understand			
CO 1	Explain and discuss issues in mobile computing and illustrate overview of wireless telephony and channel allocation in cellular systems.	K1, K4	
CO 2	Explore the concept of Wireless Networking and Wireless LAN.	K1	
CO 3	Analyse and comprehend Data management issues like data replication for mobile computers, adaptive clustering for mobile wireless networks and Disconnected operations.	K4	
CO 4	Identify Mobile computing Agents and state the issues pertaining to security and fault tolerance in mobile computing environment.	K1, K2	
CO 5	Compare and contrast various routing protocols and will identify and interpret the performance of network systems using Adhoc networks.	K2	
DETAILED SYLLABUS			3-1-0
Unit	Topic	Proposed Lecture	
I	Introduction, issues in mobile computing, overview of wireless telephony: cellular concept, GSM: air-interface, channel structure, location management: HLR-VLR, hierarchical, handoffs, channel allocation in cellular systems, CDMA, GPRS.	08	
II	Wireless Networking, Wireless LAN Overview: MAC issues, IEEE 802.11, Blue Tooth, Wireless multiple access protocols, TCP over wireless, Wireless applications, data broadcasting, Mobile IP, WAP: Architecture, protocol stack, application environment, applications.	08	
III	Data management issues, data replication for mobile computers, adaptive clustering for mobile wireless networks, File system, Disconnected operations.	08	
IV	Mobile Agents computing, security and fault tolerance, transaction processing in mobile computing environment.	08	
V	Ad Hoc networks, localization, MAC issues, Routing protocols, global state routing (GSR), Destination sequenced distance vector routing (DSDV), Dynamic source routing (DSR), Ad Hoc on demand distance vector routing (AODV), Temporary ordered routing algorithm (TORA), QoS in Ad Hoc Networks, applications.	08	
<b>Text books:</b> <ol style="list-style-type: none"> <li>1. J. Schiller, Mobile Communications, Addison Wesley.</li> <li>2. A. Mehrotra, GSM System Engineering.</li> <li>3. M. V. D. Heijden, M. Taylor, Understanding WAP, Artech House.</li> <li>4. Charles Perkins, Mobile IP, Addison Wesley.</li> <li>5. Charles Perkins, Ad hoc Networks, Addison Wesley.</li> </ol>			

<b>KCS712</b>			<b>Internet of Things</b>		
<b>Course Outcome (CO)</b>			<b>Bloom's Knowledge Level (KL)</b>		
<b>At the end of course, the student will be able to understand</b>					
CO 1	Demonstrate basic concepts, principles and challenges in IoT.			K1,K2	
CO 2	Illustrate functioning of hardware devices and sensors used for IoT.			K2	
CO 3	Analyze network communication aspects and protocols used in IoT.			K4	
CO 4	Apply IoT for developing real life applications using Arduinio programming.			K3	
CP 5	To develop IoT infrastructure for popular applications			K <sub>2</sub> , K <sub>3</sub>	
<b>DETAILED SYLLABUS</b>					<b>3-1-0</b>
<b>Unit</b>	<b>Topic</b>				<b>Proposed Lecture</b>
<b>I</b>	<b>Internet of Things (IoT):</b> Vision, Definition, Conceptual Framework, Architectural view, technology behind IoT, Sources of the IoT, M2M Communication, IoT Examples. Design Principles for Connected Devices: IoT/M2M systems layers and design standardization, communication technologies, data enrichment and consolidation, ease of designing and affordability				<b>08</b>
<b>II</b>	<b>Hardware for IoT:</b> Sensors, Digital sensors, actuators, radio frequency identification (RFID) technology, wireless sensor networks, participatory sensing technology. Embedded Platforms for IoT: Embedded computing basics, Overview of IOT supported Hardware platforms such as Arduino, NetArduino, Raspberry pi, Beagle Bone, Intel Galileo boards and ARM cortex.				<b>08</b>
<b>III</b>	<b>Network &amp; Communication aspects in IoT:</b> Wireless Medium access issues, MAC protocol survey, Survey routing protocols, Sensor deployment & Node discovery, Data aggregation & dissemination				<b>08</b>
<b>IV</b>	<b>Programming the Arduinio:</b> Arduinio Platform Boards Anatomy, Arduinio IDE, coding, using emulator, using libraries, additions in arduinio, programming the arduinio for IoT.				<b>08</b>
<b>V</b>	<b>Challenges in IoT Design challenges:</b> Development Challenges, Security Challenges, Other challenges IoT Applications: Smart Metering, E-health, City Automation, Automotive Applications, home automation, smart cards, communicating data with H/W units, mobiles, tablets, Designing of smart street lights in smart city.				<b>08</b>
<b>Text books:</b>					
1. Olivier Hersent,DavidBoswarthick, Omar Elloumi“The Internet of Things key applications and protocols”, willey					
2. Jeeva Jose, Internet of Things, Khanna Publishing House					
3. Michael Miller “The Internet of Things” by Pearson					
4. Raj Kamal “INTERNET OF THINGS”, McGraw-Hill, 1ST Edition, 2016					
5. ArshdeepBahga, Vijay Madiseti “Internet of Things (A hands on approach)” 1ST edition, VPI publications,2014					
6. Adrian McEwen,Hakin Cassimally “Designing the Internet of Things” Wiley India					

KAD075 Machine Learning & Network Security		
Course Outcome ( CO)		Bloom's Knowledge Level (KL)
<b>At the end of course, the student will be able to</b>		
CO 1	Learn different machine learning algorithms to secure information.	K <sub>1</sub> , K <sub>2</sub>
CO 2	Implement filtering methods using machine learning techniques.	K <sub>2</sub> , K <sub>3</sub>
CO 3	Analyze different methods of detecting anomalies.	K <sub>3</sub> , K <sub>4</sub>
CO 4	Perform malware analysis using extracted information.	K <sub>4</sub> , K <sub>5</sub>
CO 5	Visualize the attacks on consumer websites.	K <sub>3</sub> , K <sub>4</sub>
CO 6	Model machine learning-based systems to create production environments.	K <sub>3</sub> , K <sub>4</sub>
<b>DETAILED SYLLABUS</b>		<b>3 0 0</b>
Unit	Topic	Proposed Lecture
I	<b>Convergence of Machine Learning and Network Security:</b> Cyber Threat Landscape, The Cyber Attacker's Economy, Overview of Machine Learning, Real World Uses of Machine Learning in Security, Spam Fighting: An Iterative Approach.	<b>08</b>
II	<b>Anomaly Detection and Network Traffic Analysis:</b> Anomaly Detection vs. Supervised Learning, Intrusion Detection with Heuristics, Data Driven Methods, Feature Engineering for Anomaly Detection, Challenges of Using Machine Learning in Anomaly Detection, Theory of Network Defense, Building a Predictive Model to Classify Network Attacks.	<b>08</b>
III	<b>Malware Analysis and Protecting the Consumer Web:</b> Understanding Malware, Feature Generation, From Features to Classification, Live and Dead Malware Analysis, Android Malware Analysis, Monetizing the Consumer Web, Types of Abuse and the Data That Can Stop Them, Supervised Learning for Abuse Problems, Clustering Abuse.	<b>08</b>
IV	<b>Machine Learning Algorithms for Security Applications:</b> Implementing Filtering Methods, Different Methods of Detecting Anomalies, Visualization of Attacks on Consumer Websites, Practical Applications in Speech Recognition, Image Recognition, and Target Recognition.	<b>08</b>
V	<b>Production Systems and Advanced Machine Learning Techniques:</b> Defining Machine Learning System Maturity and Scalability, Data Quality, Model Quality, Performance, Maintainability, Monitoring and Alerting, Security and Reliability, Translating Machine Learning Algorithms from Lab to Production.	<b>08</b>
<b>Text books:</b>		
<ol style="list-style-type: none"> <li>1. Clarence Chio, David Freeman, <i>Machine Learning and Security</i>, O'Reilly Media, Inc. ISBN: 9781491979907.</li> <li>2. KCS714		Blockchain Architecture Design	
Course Outcome ( CO)		Bloom's Knowledge Level (KL)	
<b>At the end of course , the student will be able to</b>			
CO 1	Describe the basic understanding of Blockchain architecture along with its primitive.	K <sub>1</sub> , K <sub>2</sub>	
CO 2	Explain the requirements for basic protocol along with scalability aspects.	K <sub>2</sub> , K <sub>3</sub>	
CO 3	Design and deploy the consensus process using frontend and backend.	K <sub>3</sub> , K <sub>4</sub>	
CO 4	Apply Blockchain techniques for different use cases like Finance, Trade/Supply and Government activities.	K <sub>4</sub> , K <sub>5</sub>	
<b>DETAILED SYLLABUS</b>			<b>3-0-0</b>
Unit	Topic	Proposed Lecture	
<b>I</b>	<b>Introduction to Blockchain:</b> Digital Money to Distributed Ledgers , Design Primitives: Protocols, Security, Consensus, Permissions, Privacy. Blockchain Architecture and Design: Basic crypto primitives: Hash, Signature,) Hashchain to Blockchain, Basic consensus mechanisms	<b>08</b>	
<b>II</b>	<b>Consensus:</b> Requirements for the consensus protocols, Proof of Work (PoW), Scalability aspects of Blockchain consensus protocols Permissioned Blockchains: Design goals, Consensus protocols for Permissioned Blockchains	<b>08</b>	
<b>III</b>	<b>Hyperledger Fabric (A):</b> Decomposing the consensus process , Hyperledger fabric components, Chaincode Design and Implementation <b>Hyperledger Fabric (B):</b> Beyond Chaincode: fabric SDK and Front End (b) Hyperledger composer tool	<b>08</b>	
<b>IV</b>	<b>Use case 1 :</b> Blockchain in Financial Software and Systems (FSS): (i) Settlements, (ii) KYC, (iii) Capital markets, (iv) Insurance <b>Use case 2:</b> Blockchain in trade/supply chain: (i) Provenance of goods, visibility, trade/supply chain finance, invoice management discounting, etc	<b>08</b>	
<b>V</b>	<b>Use case 3:</b> Blockchain for Government: (i) Digital identity, land records and other kinds of record keeping between government entities, (ii) public distribution system social welfare systems Blockchain Cryptography, Privacy and Security on Blockchain	<b>08</b>	
<b>Text books:</b>			
<ol style="list-style-type: none"> <li>1. Mastering Bitcoin: Unlocking Digital Cryptocurrencies, by Andreas Antonopoulos</li> <li>2. Blockchain by Melanie Swa, O'Reilly</li> <li>3. Hyperledger Fabric - <a href="https://www.hyperledger.org/projects/fabric">https://www.hyperledger.org/projects/fabric</a></li> <li>4. Zero to Blockchain - An IBM Redbooks course, by Bob Dill, David Smits - <a href="https://www.redbooks.ibm.com/Redbooks.nsf/RedbookAbstracts/crse0401.html">https://www.redbooks.ibm.com/Redbooks.nsf/RedbookAbstracts/crse0401.html</a></li> </ol>			

<b>KCS354/KCS554/KCS752</b>			<b>Mini Project or Internship Assessment</b>		
<b>Course Outcome ( CO)</b>			<b>Bloom's Knowledge Level (KL)</b>		
<b>At the end of course , the student will be able to understand</b>					
CO 1	Developing a technical artifact requiring new technical skills and effectively utilizing a new software tool to complete a task			K <sub>4</sub> , K <sub>5</sub>	
CO 2	Writing requirements documentation, Selecting appropriate technologies, identifying and creating appropriate test cases for systems.			K <sub>5</sub> , K <sub>6</sub>	
CO 3	Demonstrating understanding of professional customs & practices and working with professional standards.			K <sub>4</sub> , K <sub>5</sub>	
CO 4	Improving problem-solving, critical thinking skills and report writing.			K <sub>4</sub> , K <sub>5</sub>	
CO 5	Learning professional skills like exercising leadership, behaving professionally, behaving ethically, listening effectively, participating as a member of a team, developing appropriate workplace attitudes.			K <sub>2</sub> , K <sub>4</sub>	

<b>KCS753/KCS851</b>			<b>Project</b>		
<b>Course Outcome ( CO)</b>			<b>Bloom's Knowledge Level (KL)</b>		
<b>At the end of course , the student will be able to understand</b>					
CO 1	Analyze and understand the real life problem and apply their knowledge to get programming solution.			K <sub>4</sub> , K <sub>5</sub>	
CO 2	Engage in the creative design process through the integration and application of diverse technical knowledge and expertise to meet customer needs and address social issues.			K <sub>4</sub> , K <sub>5</sub>	
CO 3	Use the various tools and techniques, coding practices for developing real life solution to the problem.			K <sub>5</sub> , K <sub>6</sub>	
CO 4	Find out the errors in software solutions and establishing the process to design maintainable software applications			K <sub>4</sub> , K <sub>5</sub>	
CO 5	Write the report about what they are doing in project and learning the team working skills			K <sub>5</sub> , K <sub>6</sub>
